NIKHIL GOVINDARAJU

Seattle, WA | (509) 957-3622 | nikhil.govindaraju312@gmail.com | linkedin.com/in/nikhil-govindaraju | GitHub | Portfolio

EDUCATION

UNIVERSITY OF SOUTHERN CALIFORNIA — **Jan 2024 - Dec 2025**
Master of Science in Computer Science | GPA: 3.81/4.0 — **Los Angeles, CA**
Coursework: Algorithms, Database Systems, Web Technologies, Information Retrieval, Machine Learning for Data Science

JSS SCIENCE AND TECHNOLOGY UNIVERSITY — **Aug 2017 - Jul 2021**
Bachelor of Engineering in Information Science and Engineering | GPA: 9.01/10.0 — **Mysore, India**

SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML5, CSS3
Frontend: React, Next.js, Vue.js, Redux, React Query, Tailwind CSS
Backend & Systems: Node.js, Express.js, NestJS, FastAPI, Spring Boot, REST APIs, WebSockets
Databases: PostgreSQL, MongoDB, MySQL, Redis, Firebase
Cloud & DevOps: AWS (EC2, S3, Lambda, CloudWatch, RDS), Docker, GitHub Actions
Testing & Tools: React Testing Library, Pytest, Playwright, Cypress, Jira, Postman
AI Engineering: OpenAI API, Claude API, LangChain, LangGraph, RAG, MCP

EXPERIENCE

Easley Dunn Productions, Inc — **Jan 2026 - Present**
Software Engineer — **Los Angeles, CA**

- Cut page weight of a production React site from 108 MB to 10 MB (-91%) and improved Lighthouse from 68 to 92 through video compression, lazy-loading, dependency pruning, and removal of a per-load Firebase write; reduced the main bundle to 135 KB gzipped
- Shipped a full technical SEO stack including Open Graph, Twitter Cards, Schema.org, sitemap.xml, robots.txt, and Google Tag Manager, and built a platform-detection download flow routing users to the App Store, Google Play, or web build
- Fixed a production responsive-layout bug by replacing percentage-based absolute positioning with an aspect-ratio-locked container, stabilizing character asset rendering across breakpoints
- Hardened a multi-page React site through a security and code-quality audit, flagged a credential-exposure risk from hardcoded API keys in the client bundle, migrated secrets to environment variables, and fixed 6 additional defects across JSX, CSS, and responsive sizing
- Co-led the analytics team, defining event schemas, wiring instrumentation, and enabling dashboards for product and marketing to measure conversion funnels, feature adoption, and player engagement across core gameplay flows

Jubilant HollisterStier LLC — **May 2025 - Aug 2025**
Software Engineering Intern — **Spokane, WA**

- Built Express.js + PostgreSQL backend services on AWS for a workforce scheduling and reporting web app in an FDA-regulated manufacturing environment, replacing a paper-based supervisor workflow with a digital system that cut timesheet processing time in half
- Designed relational schemas and REST APIs powering real-time timesheet entry from supervisors on iPads, with role-based permission checks preventing unauthorized hour changes and supporting audit requirements
- Implemented GitHub Actions with feature flags, enabling zero-downtime deployments and safer incremental rollouts in a regulated production env
- Built React dashboards consolidating technician utilization, shift coverage, and live reporting into a cross-device interface used daily by supervisors on tablets and management on desktop

Exinous Technologies India Pvt Ltd — **Sep 2022 - Nov 2023**
Software Development Engineer — **Mysore, India**

- Reduced page load time on client-facing ERP screens through API batching, image compression, and route-level code-splitting
- Developed Vue.js + TypeScript inventory management modules and authored a reusable component library adopted across multiple ERP modules, enforcing UI consistency and cutting feature build time
- Automated critical ERP workflows with Cypress E2E and API-level tests, reducing manual QA cycles and catching regressions before release

Bosch Global Software Technologies — **Jun 2021 - Sep 2022**
Associate Software Engineer — **Bangalore, India**

- Tuned radar classification logic and optimized UI redraw paths, reducing false detections by 25% and improving frame rates by 30%
- Migrated 15K+ lines of legacy Python 2 to Python 3, improving runtime stability across production systems

PROJECTS

ResumeFit | JavaScript, Chrome Extension API, Gemini/Claude/OpenAI API — **Link**

- Published a Chrome extension with a multi-stage job-description extraction system supporting 11+ ATS platforms including LinkedIn, Greenhouse, Workday, Lever, Ashby, and Indeed, with all parsing performed client-side
- Built a BYOK AI suggestion panel that delivered job-specific resume tailoring using interchangeable OpenAI/Gemini/Claude backends
- Developed an application tracker with CSV export and webhook sync to Google Sheets, Notion, and Airtable

LeaveNow | Next.js, NestJS, Spring Boot, PostgreSQL, Redis, Docker — **Link**

- Built a polyglot commute intelligence platform with Next.js, NestJS, Spring Boot, PostgreSQL, and Redis that generated leave-by recommendations from real-time Google Maps ETAs, weather inputs, and travel buffers across 4 transport modes
- Implemented Redis caching, Resilience4j circuit breakers, BullMQ job queues, and JWT auth to improve reliability and responsiveness, and hardened the system by fixing security issues and adding health checks, structured logging, and Docker Compose orchestration

Secure EHR AI | React, FastAPI, PostgreSQL, AWS — **Link**

- Built a React clinician portal with role-based views backed by FastAPI and a LangChain RAG pipeline with vector-store-backed semantic search
- Implemented RSA/AES hybrid encryption and SHA-256 hash-chained audit logging to create tamper-evident trails for patient-record updates
